

The Zistos Rescue Reel facilitates victim location and extrication by providing video/audio access into long vertical drops such as elevator shafts, wells, etc.

Rescue Reel Features:

- 330 feet (or 150 feet) of ultra low loss video and audio signal transmission cable spooled onto one compact reel
- Portable yet extremely rugged to withstand the rigors of rescue missions
- Aids in expediting the location and extrication of trapped victims caught in long vertical drops such as elevator shaft, well, stairwell, cliff, etc.
- Provides a lengthy hard-wired connection between any Zistos camera and monitor
- Supports self illuminating color or IR illuminated camera, along with audio module, but not the dual mode thermal imaging camera in BW mode.
- Slip rings provide constant video and audio signals to monitor even while cable is being spooled on or off reel.
